# Hard Problems, Powerful Solutions!

## Strategic Information Assurance Security Consulting

*SFS skillfully assists clients to identify vulnerabilities, assess risk, and develop comprehensive, Enterprise-Wide Security Solutions that comply with even the most stringent standards - in alignment with ISO 27000 and NIST SP 800. We specialize in implementing an Active Risk Management view of operations, in support of FISMA Continuous Monitoring goals. And, we prepare information systems for certification under NISPOM, ICD 503, DCID and JAFAN 6/3, DIACAP/DIARME, and NIST frameworks.*

## Encryption Management Services

*The security of digital communications is essential to the operations and integrity of any organization. To defend such, SFS has developed a unique and innovative approach to the functional implementation of encryption strategies. Our technology focuses upon an adaptive, powerful, and responsive Encryption Management solution, capable of securing the totality of the Enterprise – both effectively and efficiently. Bottom line, our Next-Generation solutions Mitigate Risk, Provide Governance, and Ensure Compliance!*

## Agile Enterprise Systems Engineering (AESE) Project Management

*AESE was specifically designed to add structure and predictability to iterative, Agile software development methodologies, while including a heavy emphasis on Risk and Configuration Management. SFS' AESE methodology is derived from best practices associated with the CMMI for Development and Services; INCOSE Systems Engineering Processes; and ITIL Service Desk standards.*

## Identification, Authentication, Authorization, & Auditing (IAAA)

*Assurance that only the right people, have access to the right data, at the right place, at the right time, is crucial to the security of any organization. SFS expertly designs, integrates, and maintains adaptive, powerful, and responsive Security Architectures to help customers comprehensively secure their information systems. Our unique IAAA solutions meet and exceed Defense and Intelligence Community security requirements. And, our Roles and Attribute-based Access Controls (RBAC/ABAC) provide both the strength and agility to effectively establish and maintain enterprise-wide security.*

## Enterprise Software/Systems Engineering and Integration

*SFS' Innovative approach to Engineering and Integration focuses on comprehensive, yet concurrent, capability enhancement for the People, Processes, and Technology involved. Our Total Engineering Solution includes both traditional, technology-based engineering, as well as process reengineering and organizational advancement across the enterprise.*
